## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-4, 7 and 10-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Imam [US 2002/0097128 A1] in view of Abel [US 6,198,374 B1].

Imam discloses a chip IC [figure 6, paragraph 3] comprising:

- an inductor coil [600]; and
- an electrically and magnetically core [640].

Imam discloses the instant claimed invention except for the specific configuration of the inductor coil.

Abel discloses an inductor formed of a plurality of magnetic layers [102-112] each including a coil pattern [122, 124, 126, 128], core piece [182, figure 4] and vias [169a-175f].

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the inductor design of Abel in Imam for the purpose of enhancing magnetic coupling.

Regarding claim 2, Imam discloses the use of CMOS technology [paragraph 27].

Regarding claim 4, Imam discloses that interconnecting pieces, winding pattern and core can be formed of the same material.

Regarding claims 11-12, the specific sizes, strength and materials used for the inductor would have been an obvious design consideration based on the desired inductance and cost parameters.

***Response to Arguments***

Applicant's arguments filed 3/31/06 have been fully considered but they are not persuasive.

Applicant argues that:

[1] Imam in view of Abel do not teach a vertical inductor including planar coils and a vertical magnetic core; and

[2] There is no reason to combine Imam and Abel.

The examiner disagrees.

Regarding [1], applicant has not claimed, nor has examiner considered, a vertical inductor including planar coils and a vertical magnetic core;

Regarding [2], In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, both Imam and Abel disclose planar inductor/transformer, a skilled artisan would have been motivated to use the core design of Abel in Imam for the purpose of enhancing magnetic coupling.

***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
